Important notification: Driver change in ECO2LED series

In order to optimize the dimming capabilities of ECO2LED series, we integrated a new 120V driver from Philips. With increased dimming capabilities and now compatible with over 18 of the most popular dimmers available on the market, ECO2LED is the perfect answer.

All ECO2LED housings ending in -120D now include this new driver.

The 277V option that we recently added remains with all ECO2LED housings ending in -277

In consideration of easing the inventory management between previous generations and the latest, we have created new product codes. Be assured that there is no price modifications between the new generation and the latest one.
