

GU24 RECESSED FIXTURE

In markets where the use of incandescent lamps are forbidden or strongly not recommended, the GU24 base ensures that lighting systems intended for high-efficiency lamps cannot be used with incandescent lamps. Energy Star program has encouraged the use of the GU24 and the majority of Energy Star qualified fixtures now use the GU24 base.

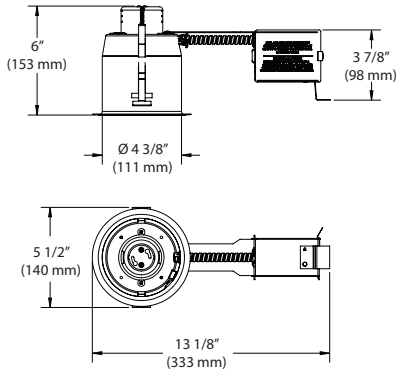

The GU24 base fixture has two receiving holes instead of the threaded receiving socket we are used to seeing on the Edison fixture. GU24 lamps are equipped with a pair of pins to match the fixture, and installation requires a simple insertion and twist to lock the lamp in place. These lamps are shorter, no need for the threading used in Edison fixtures and incandescent lamps are not available with the GU24 base.

FOR USE WITH THE FOLLOWING HOUSINGS:

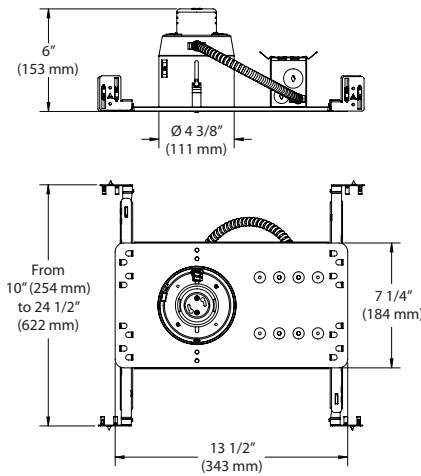

REMODEL HOUSING

GU2575

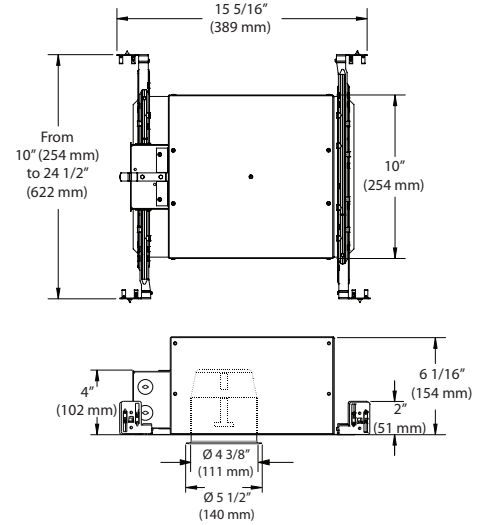

NEW CONSTRUCTION HOUSING

NWGU2575

INSULATED CEILING HOUSING
